

SCALER

Brief for your next step

Hey Rohan, good speaking with you today. You were straight about what you need -- a real shot at product company interviews in the next 9-12 months -- so I'll keep this equally straight.

Your questions answered

1

Will this actually move the needle on your product company interviews?

Your concern was whether this improves your interview conversion rate, not just your knowledge -- that is the right question to ask. Scaler's curriculum is built around exactly the gaps that trip up services engineers in product company rounds: DSA (Arrays, DP, Graphs, Heaps), System Design, and Backend Architecture are all core, not electives. The program includes AI mock interviews with live avatars and is backed by 900+ hiring partners, which means the interview prep is calibrated to what those companies actually test. Four years at Infosys gives you solid fundamentals -- the program is designed to sharpen the specific layer that product companies filter on.

2

Is the system design and coding practice rigorous enough?

You asked directly: "Does the curriculum have enough system design depth and real coding practice?" System Design is a named core module, sitting alongside DSA and Backend Architecture -- it is not a single lecture tacked on at the end. On the coding side, the program includes 50+ hands-on projects and real-world case studies, which is the closest thing to "practical" in a structured program. Live classes run 3 times a week with industry instructors -- people currently working in the roles you are targeting, not academics. For specifics on how system design modules are structured and what the project briefs look like, I am happy to share more on your next call with admissions.

3

Does Rs. 3.5L make sense given where you are right now?

You said "fee is high for me so ROI matters" -- fair, and I will not oversell this. The honest framing: the cost of staying on the services track for another 2-3 years while trying to self-study is also a cost, just a less visible one. Scaler does offer EMI options, so the Rs. 3.5L does not have to land as a single hit. The DS/ML track publishes a median salary hike of around 110% on their website; for the Academy track and your specific profile, exact outcome benchmarks are something admissions can walk you through on the next call rather than me guessing a number that may not apply to you. What I can say is the structure -- mentorship, projects, hiring partner access -- is built for people making exactly the switch you are describing.

Today

Your current compensation depends on role and city. Happy to personalize on your next call.

Target path

Stronger product and tech-facing roles depend on effort and market. We share realistic bands with admissions, not guesses.
