Move forward — structured path to stronger product/tech roles

Hey Rohan, great speaking with you today. You were refreshingly direct about what you need — a clear path from Infosys to a product-company backend role in the next 9-12 months, not just another course to add to your resume. I put this together specifically to address the four things you said matter most to you.

Your questions answered

1

“Will this actually improve my interview conversion for product companies?”

This is the right question to anchor everything on, and here's the honest answer: Scaler's program is built around exactly the gap you're describing — services engineers who are technically solid but haven't been trained to crack product-company interview formats. The curriculum covers DSA (Arrays, Recursion, DP, Graphs, Heaps), System Design, and Backend Architecture — the exact pillars that FAANG-adjacent and top product companies test. On top of that, Scaler includes AI mock interviews with live avatars and access to a 900+ hiring partner network, so you're practicing in conditions that mirror real interviews, not just studying theory. I won't promise a specific conversion rate because that depends on your effort and the roles you target — but the structure is designed to close the gap between where you are and where product-company interviewers expect you to be.

2

“Does the curriculum have enough system design depth?”

System Design is a named, standalone pillar in the Scaler Academy curriculum — not a module tucked inside something else. Given your 4 years of backend exposure at Infosys, you're not starting from zero, which means you'll be able to go deeper faster than most in your cohort. Live classes run 3x per week with industry instructors, and 1:1 mentorship is with active industry professionals — people currently working at product companies, not academics. For specifics on how system design is sequenced across the 12 months and what depth looks like at your experience level, I'd be happy to walk you through that on your next call with admissions.

3

“Is there sufficient real coding practice?”

You said you can put in the effort — you just need confidence it's practical. Scaler lists 50+ hands-on projects and real-world case studies as a core differentiator, not a bonus. The DSA track covers the full spectrum from arrays to dynamic programming and graphs — the exact problem types that show up in product-company coding rounds. This isn't a watch-videos-and-hope setup; the structure is built around doing, not just consuming. If you want to see what a typical project or coding problem set looks like, that's a great thing to ask admissions to show you concretely on the next call.

4

“Fee is high — is the ROI actually there?”

You were upfront: "Fee is high for me so ROI matters." That's fair, and I won't dress it up. At ~₹3.5L over 12 months, this is a real investment, and EMI options exist to spread the cost. The honest ROI case for your situation is this: a successful switch from a services role to a product-company backend role typically comes with a significant salary jump — and Scaler's alumni network of 100,000+ and 900+ hiring partners gives you structured access to

those opportunities rather than cold-applying alone. The only salary figure we have verified is a ~110% median hike for the DS/ML track from Scaler's website — we won't extrapolate that to your profile, because your outcome depends on your effort, the roles you target, and the market. For a realistic benchmark tied to your background and target companies, let's make that the first thing we cover on your next call.

ROI snapshot · illustrative

Today (typical services background)

■ —

Your current package depends on role & city — we'll personalise this on your next call.

Target trajectory (post-upskilling)

↑ Product / tech

Outcomes vary by effort & market. We discuss realistic ranges with admissions — never a blind promise.

Career path momentum

NOW Baseline skills audit & entrance clarity

0–4 MODSA · system building blocks · habits

4–8 MO Full stack depth · design · AI agents elective

8–12 MO Interview readiness · referrals · rounds

The entrance test is your first concrete step — it's what unlocks the next conversation with admissions and gets you into the specifics. It's also a good way to benchmark where you stand right now. Whenever you're ready, I can share the link.
